HYDROGRAPHIC BULLETIN

CHANNELS WITH PROJECT DEPTHS UNDER 25 FEET

A report of the depths available for navigation in the Federal Project Waterways of the Galveston District

★ Indicates changes from previous report

● Indicates dredging under contract

✪ Indicates changes from previous report and dredging under contract

Distances are in statute miles

Depths are based on Corps of Engineers mean low tide datum

NOTE: Miles are measured west of Harvey Lock, Louisiana, via the channel across Galveston Bay and channel from Aransas Bay to Corpus Christi Bay.

NOTE: Mileage's are measured west of Harvey Lock, Louisiana, via the Gulf Intracoastal Waterway and Houston Ship Channel to the usual take-off points on Houston Ship Channel.

The main route of the Gulf Intracoastal Waterway traverses the following reaches of other waterways that are maintained under separate projects:

Waterway	Reach
Sabine - Neches Waterway	Sabine River to West Port Arthur
Port Isabel Channel	Port Isabel Turning Basin to Connecting Channels
Connecting Channel *	Port Isabel Channel to Brownsville Channel
Brownsville Channel	Connecting Channel* to Port Brownsville

* Channel connecting Port Isabel and Brownsville Channel called the East and West Wye's.

Critical reaches of the waterway. Interruptions to traffic may occur during rises in the Brazos River since it may not be practicable to operate the floodgates at this crossing during such periods. Some delays may occur at the Colorado River Locks while vessels are locked for passage across the river during rises. Experience thus far in operating the Brazos River Floodgates and the Colorado River Locks has indicated that shoaling during rises of short duration is usually negligible when the structures are kept closed and causes no interruptions to traffic. During major rises in the rivers; however, heavy shoaling may occur in the forebays of the structures; and at times, some dredging may be required before traffic can pass.

August 2002

East Basin	3/02	370	0.3	15	14.5 ft by 370 ft		

NOTES:

① Dredging under contract between Mile 581 to 585.

② Controlling depths in the West Wye are (9.4, 10, 9.6) and the East Wye are (9.8, 9.4, 8.4) (5/02)

③ Correction to last month's Bulletin, typographic error.

④ Dredge is offsite. Expected to return at a later date.

⑤ Controlling depths in the West Wye are (3,3,2) and the East Wye are (6.7,8.2,8.5) (5/02)

⑥ Dredge is offsite. Expected to return Sept 2002.

⑦ Controlling depths shown exist in natural channel alignment (THALWEG). Old surveys were reevaluated to reflect Thalweg conditions.

⑧ Shoaling @ Mile 659. 51 (COE Sta. 48+ 000) & Mile 658.54 (COE Sta. 53+ 000)

⑨ Normal river stage is 3ft above 0-mlt and should be added to depths shown.
